

H - 7-Day Time Switch for EASY500/700 Controllers

Can be used for	
Device	From version no.:
EASY500	01
EASY700	01

General

EASY500 and EASY700 with the type reference "easy...-.C." (Clock) are equipped with a device clock (real-time clock) and allow the use of a 7-day time switch and a year time switch.

For this purpose, EASY500/700 devices offer eight time switches H1...H8 for a total of 32 switch times.

Compatibility with EASY400 and EASY600

If you wish to load an existing EASY400 or EASY600 circuit diagram, the existing 7-day time switch functions are retained. The 7-day time switch in EASY500/700 devices operates in the same way as in an EASY400/600 device.

Function

You must use a 7-day time switch in your circuit diagram exclusively as a contact. This contact will switch according to the switch times you have set.

Note: If the off time is earlier than the on time, the control relay will not switch off until the following day.

Each 7-day time switch is provided with four channels, A, B, C and D. These channels of the 7-day time switch all act jointly on the contact Hx that you include in the circuit diagram.

The following settings are possible for each channel:
Either day 1 to day 2, e.g. Monday to Friday, or only day 1.

The following abbreviations are used for the individual days of the week:
Monday = Mon, Tuesday = Tue, Wednesday = Wed, Thursday = Thur, Fri = Fri, Saturday = Sat, Sunday = Sun
The time to be entered must be between 00:00 and 23:59.

If you select the Call enabled option in the Parameter display area, you can set the channels on the device.

Behaviour in the event of a power failure

The time and date are backed up in the event of a power supply failure and continue to run. However, the time switch relays will no longer switch. The contacts are kept open when de-energized.

Switching time ranges

The following examples illustrate the function of the 7-day time switch:

[Example 1](#) : Single-channel, on successive days, on and off switching.

[Example 2](#) : Two-channel, on successive days, on and off switching.

[Example 3](#) : Two-channel, on switching on a weekday and off switching on another weekday.

[Example 4](#) : Two-channel, on and off switching on several overlapping weekdays.

[Example 5](#) : Two-channel, switch on at 0:00 on a weekday and switch off at 0:00 on another weekday.

Linking and Parameter Assignment of a 7-Day Time Switch

Requirements: You have included a control relay in the project and have switched to Circuit Diagram View.

Activating a 7-day time switch according to example 1

- ▶ Position an H 7-day time switch operand in the circuit diagram on a contact field so that you can use the switch function.
- ▶ In the Properties field window select the required function block number between 1 and 8 on the Circuit Diagram Element tab. The operand H0x will now be shown in the circuit diagram.
- ▶ If required, change the switch function of the contact from break to make contact.
- ▶ In the Parameters tab, Channel A set the weekday DY1 and at ON the hour and minute when the associated contact is to switch on.
- ▶ In the Parameters tab, Channel A set the weekday DY2 and at OFF the hour and minute when the associated contact is to switch off.
- ▶ If required, change the enable of the parameter display and/or write a comment for the selected operand.
- ▶ Connect this H0x contact in the circuit diagram.

Parameter examples

Example 1: Single-channel, on successive days, on and off switching.

The 7-day time switch is required to switch from 10:00 to 18:00 from Fridays to Sundays.

Example 2: Two-channel, on successive days, on and off switching.

The 7-day time switch is required to switch from Mondays to Fridays between 6:30 and 9:00 and between 17:00 and 22:30.

Example 3: Two-channel, on switching on a weekday and off switching on another weekday.

The 7-day time switch is required to switch on at 18:00 on Tuesdays and switch off at 06:00 on Saturdays.

Example 4: Two-channel, on and off switching on several overlapping weekdays.

The 7-day time switch settings of a time switch overlap. The time switch is required to switch on at 16:00 on Mondays, and at 10:00 on Tuesdays and Wednesdays. The off time for Mondays to Wednesdays is 22:00.

Note: On and off times always depend on the channel that switches first.

Note: After power on, the control relay always updates the switch state of contact HOxx from all defined switch time entries.

DST setting

If you have activated the [DST](#) the device clock will automatically switch between summer and winter time.

Tip: Refer to the EASY500/700 manual (AWB 2528-1508x) for more information on the function block (e.g. signal diagram).
